The 3rd vaccination

Let's get vaccinated ASAP.

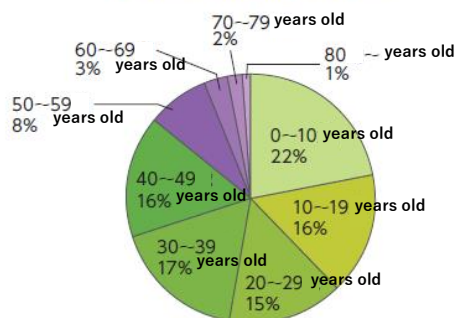

As of May 16, 70,436 people in the city had completed their 3rd vaccination (vaccination rate: 53.7%). By age group, the vaccination rate is 90% for those over 65 years old, but the rate is lower among younger generations up to 40 years old.

A look at the 1,021 new cases of infection in the city during the month of April 16-May 15 by age group shows that the infection is spreading to a generation with low vaccination rates.

Third vaccination rate by age group

Newly infected rate by age group

Even after 2 times of vaccination, the effectiveness of the vaccine gradually decrease over time.

It has been shown that a 3rd vaccination regains its effectiveness in preventing onset and severe disease.

Even young people may develop severe disease and sequelae, so please consider getting vaccinated as soon as possible.
